

# ClearCorrect

## ***What is ClearCorrect?***

Clear Correct is a modern approach to straighten teeth by using a custom-made series of aligners for your teeth. These aligner trays are made of smooth, comfortable and virtually invisible plastic that you simply wear over your teeth. Wearing the aligners will gradually and gently shift your teeth into place, based on the exact movements your dentist or orthodontist plans out for you.

## ***What is the treatment process?***

1. You and Dr. DeVitre will evaluate your teeth and talk about any problems or goals you have for your smile. Once you and Dr. DeVitre establish ClearCorrect is the right treatment option for you, he will take impressions, photos, and x-rays of your teeth that ClearCorrect uses in developing your custom aligners.
2. Dr. DeVitre will then send your impressions, photos, and x-rays to ClearCorrect with a prescription for your custom aligners. ClearCorrect uses your records to create exact 3D models of your teeth. ClearCorrect will then map out a complete treatment plan of gradual adjustment that takes your teeth from where they are currently to where you and your doctor

want them to end up. Once completed, you and your doctor will be able to preview the projected results of your treatment in your "treatment set-up," a computer representation of your teeth before and after treatment.

3. When you and Dr. DeVitre are pleased with the projected results shown in your treatment set-up, the manufacturing process begins. Using the latest digital mapping and molding technology, ClearCorrect creates your custom aligners with computer precision.
4. You'll wear your aligners all the time, except while eating and drinking or during daily tooth care, such as brushing and flossing. Your ClearCorrect aligners are so clear they are barely noticeable so they won't have an impact on your day to day life. Aligner by aligner, you'll be able to see the difference as your teeth slowly adjust and align to your target smile. You'll visit Dr. DeVitre periodically for checkups to see how you're progressing until you eventually have the straight smile you've always wanted. While every case is unique to each patient, treatment typically takes approximately a year for adults. For best results and a timely outcome, you should wear your aligners for 20 to 22 hours per day.
